

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	31 July 2026
Team ID	
Project Name	ServiceNow-Based Employee Laptop Request Application
Maximum Marks	4 Marks

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

This document captures the ideation exercise carried out by the team for the **ServiceNow-Based Employee Laptop Request Application** — a solution designed to automate and streamline the process by which employees request laptops, managers and IT approve them, and IT fulfils and tracks the assets, all within the ServiceNow platform.

Step 1: Team Gathering, Collaboration and Select the Problem Statement

Candidate Problem Statements

Employees wait 3-5 days for laptop approval due to manual, email-based requests.

IT has no centralized system to track laptop inventory or request status.

Approval workflows across managers and IT are inconsistent and hard to audit.

Employees have zero visibility into where their laptop request currently stands.

New hires often wait weeks for a laptop due to disconnected onboarding steps.

Team discussion & convergence

SELECTED PROBLEM STATEMENT

How might we build a ServiceNow-based application that automates and streamlines the employee laptop request, approval, and fulfillment process - giving employees visibility and IT full control over inventory?

Fig 1. The team gathered virtually, brainstormed candidate problem statements on a shared board, discussed feasibility and business impact, and converged on the final problem statement (highlighted).

Step 2: Brainstorm, Idea Listing and Grouping

Fig 2. Raw ideas generated during brainstorming were listed on sticky notes and grouped into five functional clusters relevant to the laptop request workflow.

Step 3: Idea Prioritization

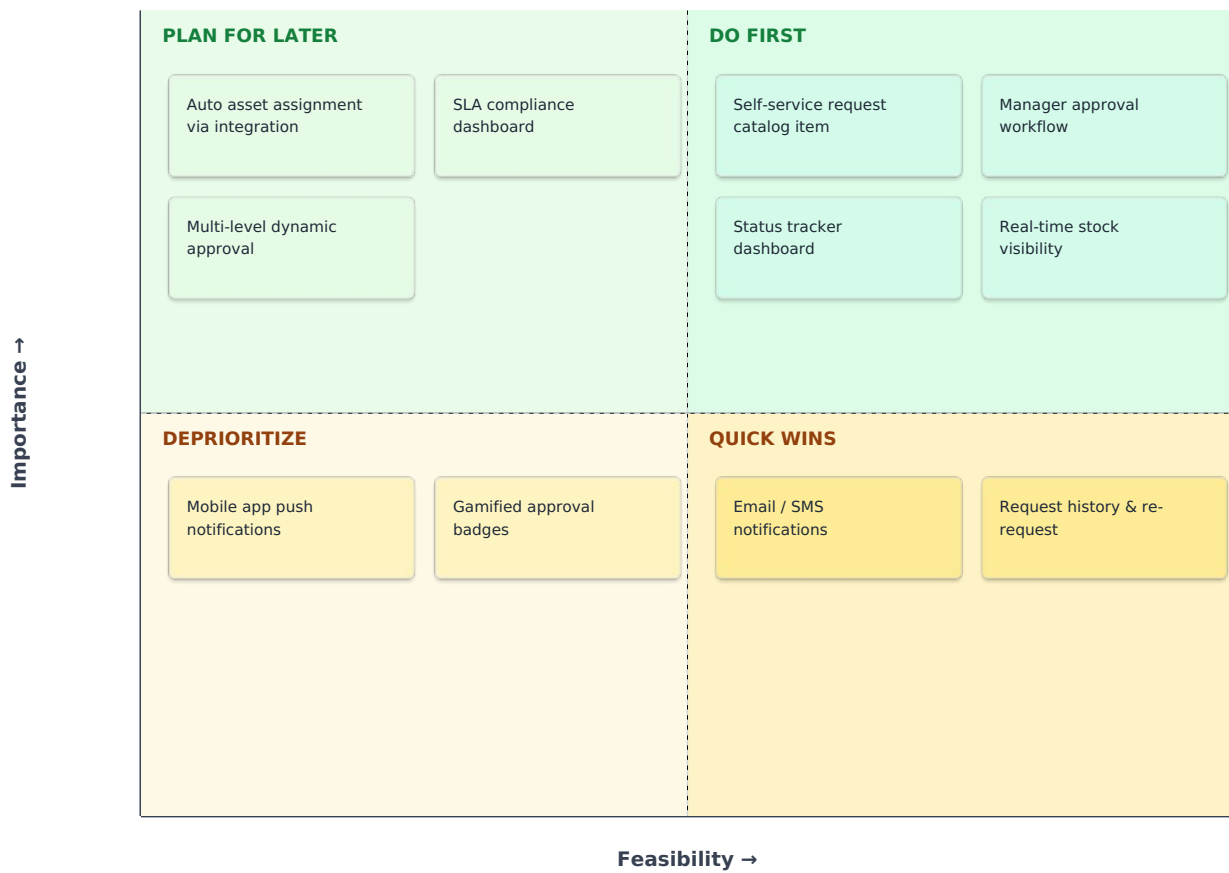

Fig 3. Grouped ideas were plotted on an Importance vs. Feasibility matrix to decide what the team builds first, plans for later, treats as a quick win, or deprioritizes.
