Maximum Marks	4 Marks

Customer Journey Map:

A customer journey map is a visual representation of every experience your customers have with your product or service. It helps a team step into the user's shoes and see the process end-to-end, rather than just the parts closest to their own role.

Mapping the journey surfaces the steps a user takes, the interactions and touchpoints along the way, their goals at each moment, and the positive and negative emotions they experience — which in turn highlights concrete opportunities to improve the experience.

The map below traces the journey of an employee requesting a laptop through the **ServiceNow-Based Employee Laptop Request Application**, from first becoming aware of the process through to receiving the device and beyond.

Employee Laptop Request Journey

SCENARIO

Requesting, getting approval for, and receiving a company laptop as an employee

	Entice		Enter		Engage		Exit		Extend	
	How does an employee become aware of this process?		What happens as they begin the process?		In the core moments, what happens?		What happens as the process finishes?		What happens after the experience is over?	
Steps What does the employee typically experience?	Joins company / needs a laptop New hire or existing employee realizes they need a device.	Learns about the self-service portal Finds out requests go through ServiceNow.	Logs into ServiceNow Signs in with company SSO credentials.	Submits laptop request Browses the catalog item and fills out the request form.	Manager approval Request routes to the employee's manager for approval.	IT reviews stock & assigns asset IT checks inventory and reserves a laptop.	Laptop configured & handed over Device is imaged, configured, and shipped or handed over.	Employee confirms receipt Employee marks the request as received/closed.	Feedback survey Employee is prompted to rate the experience.	Asset lifecycle & future requests Laptop enters standard tracking for future upgrade/replacement.
Interactions People, places, and things at each step	HR onboarding email; IT helpdesk page	Company intranet; IT helpdesk articles	ServiceNow employee portal (web/mobile)	ServiceNow Service Catalog request form	Approval notification email; ServiceNow approval workflow	IT inventory / asset management module	Asset handover confirmation in ServiceNow; courier/IT desk	ServiceNow closure/confirmation step	In-app or email feedback survey	ServiceNow asset dashboard
Goals & motivations "Help me..." or "Help me avoid..."	Help me find out how to get a laptop	Help me trust this is the right place to ask	Help me get in quickly without hassle	Help me submit my request with minimal effort	Help me get approved without unnecessary delay	Help me know an asset has been reserved for me	Help me get my laptop and start working	Help me confirm everything is in order	Help me share my experience quickly	Help me know when I'm eligible for a replacement
Positive moments Enjoyable, fun, motivating, delightful			Single sign-on makes login instant	Clean, simple self-service request form	Automatic routing to the right approver saves time		Handover happens quickly once approved	Simple one-click confirmation	Survey takes less than a minute	
Negative moments Frustrating, confusing, costly, slow	New hires often don't know the portal exists	IT documentation is confusing to navigate		Too many mandatory fields slow the request down	Manager misses or forgets the approval notification	No visibility into approval or fulfilment status	Occasionally the wrong model or specs are delivered		Survey fatigue after a long request process	No reminder for upgrade or return eligibility
Areas of opportunity How might we make each step better?	Add a "Request a Laptop" tile to the onboarding checklist	Add a "Get a Laptop" banner on the IT portal home page		Auto-fill employee & department details from the HR system	Add auto-escalation and reminders after an SLA breach	Add a live self-service status tracker	Add a pre-dispatch configuration checklist		Combine feedback with the closure step instead of a separate ask	Add proactive replacement/upgrade reminders based on asset age
