

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	31 July 2026
Team ID	
Project Name	ServiceNow-Based Employee Laptop Request Application
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration & Login	- Login through company SSO credentials - Login through email & password (fallback) - Auto-provisioning of employee profile from HR system on first login
FR-2	Laptop Request Submission	- Submit a new laptop request via the self-service catalog item - Attach supporting documents (e.g. approval memo) - Save a request as a draft and submit later
FR-3	Approval Workflow	- Route request to reporting manager for approval - Multi-level approval (Manager → IT Head) for high-value requests - Auto-escalation and reminders after SLA breach - Reject request with mandatory comments
FR-4	Asset Assignment & Fulfilment	- Check real-time stock availability by laptop model - Assign a specific asset (serial number) to an approved request - Mark request as fulfilled/closed once device is handed over
FR-5	Status Tracking & Notifications	- View real-time status of a request on a personal dashboard - Receive email/SMS notification on every status change
FR-6	Reporting & Dashboard	- SLA compliance dashboard for approval & fulfilment times - Exportable request/asset reports by department and cost centre

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The application must provide an intuitive, self-service interface that requires minimal training for an employee to submit, track, or approve a laptop request.
NFR-2	Security	All requests and approvals must be authenticated via company SSO with role-based access control, so only authorized managers and IT staff can approve or fulfil requests.
NFR-3	Reliability	The system must reliably process and route requests through the approval workflow with a failure rate below 0.1%, including proper error handling and retry logic.
NFR-4	Performance	Request submission, approval actions, and status updates must reflect on the dashboard within 3 seconds under normal load.
NFR-5	Availability	The application must maintain at least 99.5% uptime, consistent with standard ServiceNow platform SLAs.
NFR-6	Scalability	The system must scale to handle laptop requests across all company locations, departments, and headcount growth without degradation in response time.
