

Problem-Solution Fit Canvas

ServiceNow-Based Employee Laptop Request Application

PURPOSE / VISION

Make requesting, approving and fulfilling a work laptop as fast and transparent as raising any other ServiceNow ticket — so employees are productive from day one, with zero manual chasing between employee, manager and IT.

1. CUSTOMER SEGMENT(S)

CS

Employees who need a laptop for onboarding, replacement, repair, or a role-driven upgrade; and their reporting managers who must approve the request.

6. CUSTOMER CONSTRAINTS

CC

Departmental hardware budget caps, limited laptop stock, approval-hierarchy rules, security/compliance checks for asset issuance, hybrid/remote delivery locations.

5. AVAILABLE SOLUTIONS

AS

Emailing IT helpdesk, walking up to the IT desk, phoning support, raising a generic legacy ticket, or messaging IT on Teams/Slack. No status visibility, slow manual approvals, no live stock check.

Define CS, fit into CC →

Explore AS, differentiate →

2. JOBS-TO-BE-DONE / PROBLEMS

J&P

Get a work laptop assigned quickly after joining or when the current one fails; know the request status without chasing IT; get the right spec for their role.

9. PROBLEM ROOT CAUSE

RC

No single system links HR onboarding data, budget approval and IT asset inventory — requests, approvals and stock checks happen in silos across email, phone and spreadsheets.

7. BEHAVIOUR

BE

Employee emails/messages manager and IT separately, then follows up repeatedly; manager approves informally over chat; IT manually checks a spreadsheet and couriers the device.

Focus on J&P, tap into BE, understand RC →

← Focus on J&P, tap into BE, understand RC

3. TRIGGERS

TR

New-hire start date approaching, laptop breakdown/theft/loss, role change needing a higher-spec device, manager reminder in a 1:1, IT audit flagging an outdated asset.

10. YOUR SOLUTION

SL

ServiceNow Service Portal catalog item + Flow Designer approval workflow; CMDB checks live stock; Predictive Intelligence suggests the right config; employee gets real-time status until delivery.

8. CHANNELS of BEHAVIOUR

CH

8.1 ONLINE: email, Teams/Slack, HR onboarding portal, ServiceNow self-service portal, intranet.
8.2 OFFLINE: in-person IT helpdesk visit, phone call to support, printed request forms at some regional offices.

Identify strong TR & EM →

Extract online & offline CH of BE →

4. EMOTIONS: BEFORE / AFTER

EM

BEFORE: frustrated, unproductive, uncertain — waiting with no visibility into who is doing what.
AFTER: confident, in control, productive from day one — knows exactly when the laptop will arrive.
